

Month One - Video #7

Amalgam Filling Removal

1. Go to the removing the source tab up above and print out “Amalgam Filling Removal Protocol”.
2. It is imperative that you have a biological dentist trained in the proper technique for removing amalgam fillings. Here are two great sources to find one close to you.
 - a. IABDM – International Academy of Oral Medicine and Toxicology
 - b. IAOMT – International Academy of Biological Dentistry and Medicine
3. Follow the protocol as outlined to the “T” to minimize exposure while having your amalgams removed. This would be repeated if you are having the amalgams removed over multiple appointments.
